Introducing Shakleebaby™ and Shakleekids™

**Introducing Shakleebaby™ - Always Safe. Always Gentle. Always Healthy.
Open Order 5/1**

Babies are the most precious gifts in the world. Keep yours happy and healthy with Shakleebaby. Safe, pure, and natural, our pediatrician tested baby care products are formulated to keep your little one's bottoms soft, itty-bitty toes clean, and growing body healthy.

Gentle Wash

Clean, fresh baby. This extra gentle wash is made with organic chamomile and lavender, pH balanced and sensitivity tested to shower even the most tender skin with love. 99% Natural; 76% Organic.

#30108 <http://www.shaklee.net/mimc/>

Soothing Lotion

So soft. Organic sunflower seed oil and shea butter moisturize, and organic chamomile and lavender soothe. 99% Natural; 87% Organic.

#30106 <http://www.shaklee.net/mimc/>

Diaper Rash Cream

Naturally soothing. Zinc Oxide protects baby's delicate skin from wetness, keeping skin healthy and dry, and helps heal diaper rash. Organic and natural oils keep skin hydrated and smooth while chamomile, aloe, and calendula extracts soothe. 99% Natural. 78% Organic.

#30109 <http://www.shaklee.net/mimc/>

Massage Oil

Perfect for massaging baby or moisturizing after a bath. With organic sunflower oil, lavender, and chamomile to moisturize and smooth. 99% Natural, 99% Organic.

MTS Systems

Problem: MTS Leaks

Cause: Most leaks occur because connections were not tightened properly during installation.

Solution: Check connections in the area of leakage.

***If leakage occurs in the fittings connecting to the faucet or feedwater control valve, the fittings are probably too loose. Tighten the fittings until leaking stops.

***If leakage occurs at the compression nut where the tubing connects to the unit, the fittings are probably not sealed properly. Remove the tubing from the unit and examine the sealing O-ring, plastic retaining washer and metal ring. Examine the end of the tubing for damage. If tubing is damaged, slide metal ring, plastic retaining washer and O-ring down the tube 1 inch, then cut off 1/2 inch of tubing, leaving 1/2 inch of tubing exposed past the O-ring. Insert tubing into housing fitting, making sure O-ring is properly sealed in fitting. Tighten compression nut.

***If leakage occurs between the filter housing and head, it's probably the result of overtightening. This can distort or damage the O-ring, resulting in a poor connection.

Remember the following:

1. During installation, hand tighten the head to the housing until snug, then give a 1/4 turn. Do not overtighten.
2. If leaking occurs after installation, retighten this connection, as in Step #1.
3. If the connection has been overtightened, check the O-ring:
 - A. If the O-ring appears deformed, relubricate it and retighten the connection.
 - B. If leaking continues or if the O-ring appears damaged, replace the O-ring.
