PROPER USES OF BASIC- CONCENTRATED ORGANIC CLEANER

Basic-H® Concentrated Organic Cleaner

Introduced in 1960, Basic-H was one of the first, general-purpose biodegradable cleaners. Since then, no other cleaner has offered as much versatility. It provides concentrated cleaning that's suitable for a variety of household cleaning needs—even the toughest jobs. Yet, Basic-H delivers safe, efficient cleaning power without contributing to environmental pollution.

Basic-H offers unique performance advantages over many types of cleaners, from porcelain, ceramic, and tile cleaners, to car wash soaps. It also works on delicate washables, dishes, and on surfaces such as windows and mirrors.

Guidelines for Getting the Most from Basic-H®

Just one teaspoon of Basic-H in a quart of warm water makes a powerful solution safe for cleaning most household surfaces that are also safe when exposed to water. Basic-H may require rinsing when used on floors, especially important to prevent accelerated soiling in high traffic areas. Never use Basic-H on carpets, as it removes carpet's protective coating, which could accelerate soiling and fading from sunlight.

CAUTION: Some plastics may be sensitive to the cleaning agents in Basic-H. Do not use Basic-H on plastic or fiberglass without contacting the manufacturer for compatibility with cleaners with linear alcohol ethoxylates.

Although Basic-H is U.S.D.A.-approved for hand washing, Shaklee does not recommend the product for personal care. An eye irritant, Basic-H should not be used to clean contact lenses, plastic-forward lenses, or plastic-glass frames.

Because of risk of irritation, particularly among young females, Basic-H should not be used as a bath additive in any amount, even when diluted. Bath additives require special testing, which has not been conducted on Basic-H. Basic-H should not be used as a general shampoo or dandruff shampoo.

Do not mix Basic-H with Basic-G® Germicidal Cleaner. The water wetting agents in Basic-H inactivate the germ-killing agents in Basic-G.

Basic-H must not be used on companion or farm animals, or added to any animal feed. It is not a food additive and is not for internal consumption. Do not use Basic-H for treating burns or skin injuries. It is not a legally registered insect repellent, yard spray, or soil adjuvant. Do not use to clean aquariums, as the residue from Basic-H can make tank water "too wet", causing fish to drown.

Basic-H is one of the most popular products that Shaklee offers. This safe, high-performing biodegradable cleaner should be your first choice if you're looking for a replacement to many common household cleaners that contain harsh ingredients such as chlorine, ammonia, or other solvents. Give your home a healthy cleaning with Basic-H.
