Introducing Shakleebaby™ and Shakleekids™

**Introducing Shakleebaby™ - Always Safe. Always Gentle. Always Healthy.
Open Order 5/1**

Babies are the most precious gifts in the world. Keep yours happy and healthy with Shakleebaby. Safe, pure, and natural, our pediatrician tested baby care products are formulated to keep your little one's bottoms soft, itty-bitty toes clean, and growing body healthy.

Gentle Wash

Clean, fresh baby. This extra gentle wash is made with organic chamomile and lavender, pH balanced and sensitivity tested to shower even the most tender skin with love. 99% Natural; 76% Organic.

#30108 <http://www.shaklee.net/mimc/>

Soothing Lotion

So soft. Organic sunflower seed oil and shea butter moisturize, and organic chamomile and lavender soothe. 99% Natural; 87% Organic.

#30106 <http://www.shaklee.net/mimc/>

Diaper Rash Cream

Naturally soothing. Zinc Oxide protects baby's delicate skin from wetness, keeping skin healthy and dry, and helps heal diaper rash. Organic and natural oils keep skin hydrated and smooth while chamomile, aloe, and calendula extracts soothe. 99% Natural. 78% Organic.

#30109 <http://www.shaklee.net/mimc/>

Massage Oil

Perfect for massaging baby or moisturizing after a bath. With organic sunflower oil, lavender, and chamomile to moisturize and smooth. 99% Natural, 99% Organic.

Countertop RO System Replacement Hose Kit (#51041) Instructions

This replacement hose assembly will work on BestWater Countertop RO Systems with brass or plastic fittings.

Instructions

1. Remove the back panel of the RO System and the Prefilter.
2. Refer to **Figure A** and examine the Feedwater and RO Module fittings. They will be plastic or brass.

If **A.** both fittings are brass, → no tubing cuts need to be made. Proceed to step 5.

If **B.** the Feedwater Fitting is plastic, → cut the green tube.

If **C.** the RO Module Fitting is plastic, → cut the black tube.

3. Referring to **Figure D**, cut either the green or black tube, or both about 3/4" from the end of the tube (See **No.1** on the diagram). For best results, carefully use a single-edge razor blade or equivalent to make a clean straight cut, ensuring there are no scrapes or nicks on the tubing. Do not use scissors or other similar cutters, as they will mishape the tubing.
4. If the green tubing is cut, then also cut the blue tubing as shown in **Figure D**, maintaining about a 6" difference between the green and blue tubes.

The new hose assembly is now ready for installation.

5. To protect the Overflow Port, remove the Debubbler Assembly first by pulling it directly toward you, twisting gently if necessary. (See **Figure B**) Remove the blue tubing from the Debubbler Assembly and then remove the green and black tubes. Use a wrench to remove the brass fittings; for plastic fittings, refer to **Figure C**. If necessary, remove the white hose clamp. Free the old hose assembly from the back panel.
6. Install the new hose assembly by following step 5 in reverse order. **Note:** You may want to wait until all three tubing connections are made before reattaching the white hose retaining clamp. Also, make sure that the Debubbler Assembly is oriented correctly (if it is the hard plastic Debubbler, the correct orientation is with the long side pointing down; the older soft Debubbler may be installed in either orientation).
7. Replace the Prefilter. Make sure that the filter cartridge is locked into place (the filter should not come loose when firmly pulled straight down) and the label is facing you. If other cartridges (RO and Postfilter) were replaced, check them at this time as well.
8. Before replacing the back panel, connect the system to your faucet. Turn it on and check carefully for leaks. If you discover a leak from a push-in fitting, refer to **Figure C** to repair the leak. **Note:** When repairing a leak, and need to trim the green tubing, also trim the blue tubing by the same amount. Check the distance between the end of the green tubing and the end of the blue tubing using **Figure D**. Once all tubing is checked, replace the back panel. Clean the reservoir with a clean damp cloth or paper towel (do not use scouring pads or powders). Discard the first reservoir (storage tank) full of water. If you replaced the RO Module or Postfilter, discard an additional reservoir of water before use. Some residual black fines and Total Dissolved Solids (TDS) are normal until the filter is completely flushed.
