*"I moved my AirSource 3000 unit around the house as suggested by the person I bought it from and I couldn't believe how well it worked. My basement smelled of mold, but after I left the AirSource unit in*

# AirSource 3000

*there for a day, it cleared it up! Also, I've tried it in my closet and its contents—shoes especially, have never smelled fresher. I'm usually a very skeptical person and I had my doubts before I tried it, but seeing is truly believing."*

**OUR COMMITMENT:**

*A FREE, no-risk in-home trial and a three-year limited warranty*

We're sure that the AirSource 3000 will make a difference in the indoor air quality of your home. So you can try it FREE. In only 72 hours, you'll notice a real difference.

Remember, the World Health Organization (WHO) states that 40% of all buildings pose a serious threat to health because of polluted air. You've got nothing to lose but pollutants, microbials, and gases.

## AirSource® 3000

### Air Purifier

---

**The solution to indoor air purification where we live**

---

# Where our hearts lie...

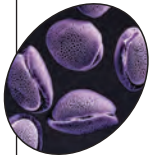

*It's about those we care for the most—our family and our friends. It's important that we protect them from all sorts of dangers—including some serious problems right in our homes.*

What happens to our families? Indoor air pollution increasingly causes them to suffer:

- Eye and skin irritation
- Nose and throat discomfort
- Lung irritation
- The unpleasantness of offensive odors
- Fatigue

## **OUR PROBLEM:** *Indoor air pollution*

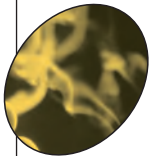

We all know about outdoor air pollution. But the air inside our homes may be even more dangerous to breathe! The Environmental Protection Agency called indoor air pollution one of the nation's top environmental health concerns. Today's homes are filled with:

**PARTICULATES:** solid particles and liquid droplets you can't always see—like pollen, ash, dust and dead skin cells, pet dander—plus cigarette smoke

**MICROBIALS:** microscopic bacteria, fungi, and mold—often thriving in your heating and air-conditioning ducts, bathroom, and kitchen

**GASES:** smelly or odorless fumes escaping from your carpets, drapes, furniture, cleaning materials, cosmetics, and more

*A single AirSource 3000 unit cleans the air in a home up to 3,000 square feet.*

## **OUR SOLUTION:** *The filterless AirSource® 3000*

It's all about taking control of our indoor environment. And the unique AirSource 3000 lets you do just that! Now, we can all breathe more freely because the AirSource 3000 cleans indoor air more thoroughly than other products on the market through:

- Photohydroionization™\* and Electron Generation, a unique combination of technologies that reach out to clean the air in your home—up to 3,000 square feet.
- A single solution that dramatically reduces all three major types of indoor air pollution—particulates, microbials, and odors.
- A sleek design offering quiet, virtually maintenance-free, filterless performance as convenient as it is effective.

## **Test results prove it!**

Independent laboratory test results prove reduction of pollutants in up to 3,000 square feet.

They also indicate:

- 40-56% odor reduction
- 97.7% mold reduction
- 90.9% yeast reduction
- 95% reduction of particulates as small as 0.5 microns

## **OUR GUARANTEE:**

*Healthy results with a safe approach. Just compare!*

Only the AirSource 3000:

- Attacks all three indoor pollutants, including microscopic particulates, enabling everyone in your family to breathe more freely
- Uses little electricity (nearly equivalent to a standard light bulb)
- Does away with “black wall”—dirt on walls typically caused by ionization streams
- Provides real safety since it's not an ozone generator

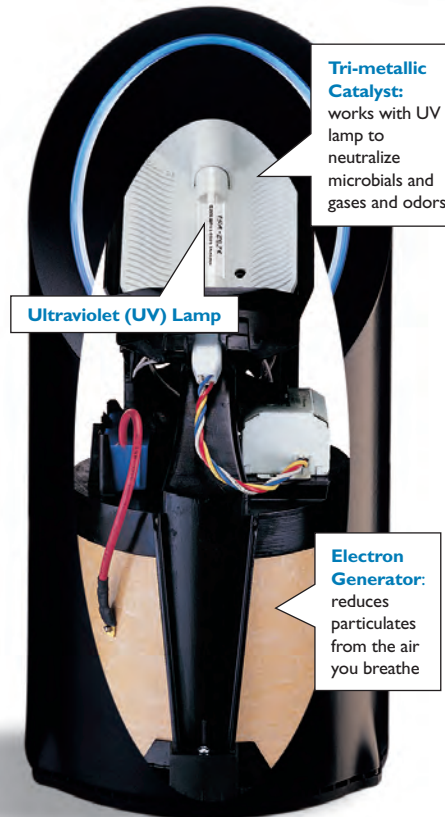

## **OUR SCIENCE:**

*A patent-pending technology that's ahead of its time.*

Ordinary devices clean only air that passes through the unit. A lot of air—and pollutants—may remain untreated. The AirSource 3000 offers a better way:

- The first air purifier to combine Photohydroionization and Electron Generation—simulates the way nature cleans the air outside after a rainstorm. The AirSource 3000 sends out cleansing ions to clean the air in every room in homes up to 3,000 square feet.
- The elimination of filters, which breed more pollutants, for a cleaner solution.
- Support from several years of testing, including independent lab test results.
- A patent-pending combination of state-of-the-art technologies.

*Result? Your air not only smells fresher. It's cleaner!*
